RE: FOOD SAFETY AND TESTING

We herewith advise that we have, in addition to those microbial and other tests conducted by our companies on a regular basis as part of their accreditation compliance processes, also conducted testing for listeria monocytogenes on recent samples of both base and lidding materials manufactured at our Barrier Film Converters and Peninsula Packaging facilities respectively. These tests are conducted by Swift Siliker, an independent and reputable specialist service provider. We can report that no traces of listeria monocytogenes were found in the samples tested. The test results for all other tests were also within required limits as specified.

We acknowledge the importance of food safety practises and remain committed and continue to invest in our programs and processes to ensure that you as customer can remain confident in the products we supply.

Should you have any product needs at this time please do not hesitate to contact us.

Regards

Manley Diedloff

Chief Executive Officer
